

Project Status Report I

Date of Report Issue/Prepared: **Feb 08, 2026**

Report Prepared By Team Members: **Calivoso, Jezril; Figuera La Riva, Carlos; Lopes Mafra, Breno; Wagner, Henry**

Employer/Organization (if applicable) : **N/A**

Project Name: MoviCare - Mobile App (Expo Router + Firebase/Firestore) - Senior & Family Modules Project Team : T26 Period Reporting: Overall Project Health	Yellow (Warning) - Core features are implemented but several integration issues remain (notifications targeting, location sharing, health persistence, routing consistency).	
	Start Date: Jan 12, 2026	End Date: Feb 06, 2026
	Green (Good) / Yellow (Warning) / Red (Bad)	

Summary

Project Status Summary

We are developing the MoviCare mobile application using Expo Router and Firebase/Firestore, focusing on Senior and Family user flows. During this period we stabilized authentication/profile persistence, improved senior home behaviors (check-in vs emergency), and built family-side visibility into senior details. Remaining work focuses on correct notification targeting, health metrics persistence (BP/BMI), check-in location sharing, and ensuring family dashboards show accurate names/status per senior.

- Authentication/profile flows stabilized; role and Firestore-safe profile updates improved.
- Senior module: check-in vs emergency logic refined; health/profile screens improved.
- Family module: senior detail screen scaffolded to show profile, health, medications, appointments, and recent activity.

Accomplishments As Planned

Planned but not Accomplished

Implemented/updated AuthContext logic to avoid Firestore “undefined” writes and normalize profile fields safely. Senior Home: implemented check-in vs emergency behaviors (tap vs long-press) and notifications trigger. Senior Profile/Health screens: improved field handling for DOB/address/phone/emergency contact. Family module: created Senior Details view to fetch senior profile + subscribe to senior medications/appointments and show recent activity from notifications. Routing and screen structure aligned with Expo Router patterns (role-based folders and [uid] dynamic routes).	Fix notification targeting so seniors do not receive notifications intended for family/caregivers. Save and display BMI and Blood Pressure consistently (and prevent “undefined” UI values). Check-in should update only the sending senior’s status (not all seniors linked to a family member). Family should see the senior’s check-in location (map/address or coordinates).

Upcoming Objectives for **Feb 07, 2026 to Mar 13, 2026**

	Planned Activities/Tasks for Next Period		
Activity/Task	Assigned To Team Member	Duration (days)	Date Range
Fix notifications: write only to intended recipient, add recipientRole/recipientUid, filter queries	Jezril	4	Feb 07-11
Implement check-in location capture, store in notification meta, display on family dashboard	Carlos	5	Feb 07-12
Correct status logic: per-senior status storage, not global	Breno	3	Feb 07-10
Persist BP and BMI: save metrics, compute BMI client-side, render properly	Henry	4	Feb 08-12
Clean up imports, remove legacy components, standardize UI components	Jezril	2	Feb 12-14
Add data validation	Carlos	2	Feb 13-15

+ defaults for health arrays to always be arrays			
--	--	--	--

Managing Issues and Risk (for current reporting period and next period)

Issues/Problems	Resolution Strategy	Due Date

Upcoming Risks	Risk Ranking (Hi, Med, Low)	Risk Impact (Hi, Med, Low)	Mitigation Strategy

NOTE: Attach additional sheets if insufficient space available

Submission Guidelines:

Please submit as “W26_T<team number>_ProjectReport1”.
For e.g., W26_T99_ProjectReport1

This is a group submission i.e. one per group.

Due Dates:

Sunday, Feb 08, 2026 (11:59 p.m.)
